Make Your Business Information, Reports and Documents Available for Productive Collaboration through Microsoft Dynamics GP and Microsoft Office SharePoint Server (MOSS)

Using Microsoft Dynamics GP 10.0 and Microsoft Office SharePoint Server 2007 (MOSS) together can help you eliminate most of the limitations imposed by geographic location, organizational boundaries, and segmented storage of business documents and information. Pairing the two solutions makes your business information, reports and documents available to your employees, customers and business partners. You can use the two solutions to increase the productivity and consistency of your business processes, boost the value and usefulness of information, and enable managers and workers to make more sound decisions.

Find pertinent information easily with advanced search capabilities:

Advanced search capabilities allow workers to rapidly and conveniently find relevant information and files on company portals. You can initiate searches from Microsoft Dynamics GP, "MOSS" or the Desktop Search function. Additionally, using the Business Data Catalog in "MOSS" allows you to pull data not only from

Business Intelligence – Enable people to make more informed business decisions with confidence

Microsoft Dynamics GP enhances business intelligence (BI) capabilities and helps people at all levels of the organization transform data into actionable insight. Microsoft Dynamics GP provides companies with a wide range of analysis tools, some of which are included in the core solution while others, that are more specific to your business goals, are offered as additional products. Microsoft Dynamics BI equips your people with the necessary tools to effectively monitor, analyze and plan. These three activities are essential to making the fast, informed decisions that fuel success today and strengthen your business for the future.

Business Intelligence allows your company to have visibility over changing business conditions:

Accurately monitoring current business activity, then comparing it to historical activity and plans, gives your employees the contextual information they need to keep performance on track. Inquiry windows in Microsoft Dynamics GP make it easy to browse and drill into details within those inquiries by selecting specific fields. Similarly, audit trails allow people to quickly track transactions throughout the system.

GP & MOSS continued from page 1

Dynamics GP, but also from Microsoft Office Word 2007 documents, Office Excel 2007 spreadsheets and Microsoft Office Outlook 2007 email messages.

Automate consistent, efficient business processes:

When key business processes and critical daily tasks are automated into a structured workflow, you can ensure that the right people take the right action at the right time. An environment organized by a structured workflow system will result in your business operating at an accelerated pace due in large part to your employees being more focused on their critical tasks and action items. Microsoft Dynamics GP and "MOSS" take task accountability one step further and incorporate an audit trail of task ownership which helps workers achieve consistency.

For more information on how Microsoft Dynamics GP & MOSS can make your business more effective contact Turnkey Technologies, Inc. at (636) 777-4110 x14.

President's Letter continued from page 4

This constant, in-touch communication capability helps me leverage my time and expenses, and dramatically helps me improve customer service in terms of responsiveness and just being always informed. A year ago, if you asked me if my business would rely on instant messaging to gain a competitive advantage, I might not have agreed. Today, I see our interconnected communities going more virtual and requiring more connection to our team members and customers on a real-time basis.

Today, my Outlook client travels with me all the time on my telephone and is accessed in a manner no different than the usual text messaging. The difference this week over last, I never have to tell people that I've been out of the office all day and haven't checked my email. Technology has overcome that excuse. Turnkey plans to have an instant messaging and chat sessions available on our new website that should show up later this year.

User Group Meeting in September 2007!

Support for Microsoft Great Plains 8.0 Ends Oct. 9!

Customers who are currently using payroll need to upgrade to a newer version of Microsoft Dynamics GP to receive tax and regulatory updates as the support for Microsoft Great Plains 8.0 will end October 9, 2007.

BI continued from page 1

In addition to tracking changing business conditions, Microsoft Dynamics GP offers BI tools that help businesses stay competitive and confidently plan for the future.

Microsoft Forecaster – a budgeting and planning application that works within Microsoft Dynamics GP – helps your people build budgets that incorporate first-hand knowledge of market conditions and specific business objectives. The result is a commitment to the budget from those responsible for delivering against it. Additionally, Microsoft Forecaster allows the user to adjust forecasts and budgets as the business environment changes, creating an environment where managers can respond effectively.

Most importantly, Microsoft Dynamics BI empowers your decision-makers by giving them access to critical information across the organization, which allows them to make business decisions with confidence.

For more information on BI contact Turnkey Technologies, Inc. at (636) 777-4110 x14.

Microsoft Dynamics GP Roadmap Update:

Microsoft announced the future roadmap for Microsoft Dynamics GP last month at its Worldwide Partner Conference in Denver. Over the past several years, Dynamics version releases, promised every 18 months, have actually flowed at a more aggressive 15 to 17 month schedule. Version 10, however, with its significant changes in user interface and its deep integration with other Microsoft technologies such as Sharepoint and Excel ODC's along with its new security system presents users with significant upgrade opportunities. Microsoft has committed to giving users 24 months to adopt the platform with all of its robust features.

During this time, Microsoft plans to drive more integration for the Dynamics GP product line. This includes Dynamics Live Assistant, part of the Live Communications Server family, additional integration with Office 2007 and new robust mobile applications. Microsoft demonstrated several mobile applications in development that allow remote sales teams to collect and enter orders using cellular technology.

Turnkey celebrates with Curacao Oil Company after a successful GP 9.0 go live over the July 14th weekend in Curacao, Netherland Antilles, which is 40 miles off of Venezuela. Dinner was celebrated at Fort Nassau which offers a commanding view over the port of Curacao.

Your renewal date must be within the next 60 days to qualify.

For more information on any of these promotions, contact Turnkey Technologies at (636) 777-4110.

From the Presidents Desk...**Messaging...things to consider**

Messaging is becoming a very large part of our society. I find myself turning to instant text messaging in order to communicate with co-workers on specific questions instead of picking up the telephone. The list of people that I text has increased dramatically just since the beginning of this year. Why? As a techno-consultant, I continue to challenge myself and my organization to be more efficient in how we work, collaborate and consume resources.

So why a text instead of a phone call:

- Direct to the point: text messages are very specific communications
- There is a need to be concise: typing on a very small keyboard, via a phone or PDA, is too cumbersome to have long winded conversations
- Expense: phone calls can last much longer than necessary (people talk too much) and at a greater expense (long distance charges, cellular costs, people time)
- Real-time: I can send a text message and I don't get a busy signal when I hit send
- Concurrency: I can have simultaneous conversations with multiple people without being rude

I recently decided to sync my Outlook with my phone in addition to my contacts and calendar which I always have synchronized to my phone. As part of this change, I decided to upgrade my AT&T cellular plan to include unlimited broadband access so I wasn't concerned about pulling down the large emails that commonly come through my inbox. Another key detail to this working was having the right spam blocking technology on my Microsoft Exchange server so I didn't get hundreds of emails per day.
